

# Advanced Receiving

Streamline Your Inventory Management with Efficiency

## Overview

The Advanced Receiving tool is designed to make inventory management smoother, quicker, and more efficient. From rapid processing of multiple lines to intuitive drag-and-drop bin assignments, Advanced Receiving is your solution for simplifying complex receiving workflows.

## Key Functionalities

### Quick Line Processing

Receive multiple transaction lines effortlessly with just a few clicks, saving time on repetitive tasks.

### Multiple Inventory Line Updates

Easily update inventory details across multiple transaction lines in a single action, ensuring consistent and accurate data across your inventory records.

### Drag-and-Drop Bin Management

Assign line bins effortlessly using a drag-and-drop interface that supports both single and multi-element selection, enhancing flexibility in bin or line organization.

### Customizable Filtering Options

Filter transaction lines by criteria such as item, description, and quantity for more precise management of inventory details.

### Location-Based Bin Filtering

Quickly locate specific bins by filtering based on location and name, making it easier to organize and retrieve items.

# Key Benefits

1

## Increased Efficiency

Simplify high-volume receiving processes with intuitive, streamlined functionality.

2

## Greater Accuracy

Ensure accurate bin assignments and data consistency with mass update capabilities.

3

## Enhanced Flexibility

Organize bins and transaction lines with flexible filtering and drag-and-drop options tailored to your needs.
