

JSI Connector

Seamless Manufacturer-Dealer connection within
CFI Suite powered by NetSuite

CFI Suite
NetSuite® for the Contract Furniture Industry

Overview

The JSI (Jasper Group) Connector provides contract furniture dealers with the ability to electronically send orders and receive acknowledgments from JSI via CFI Suite, powered by NetSuite. This seamless integration eliminates manual processes, increasing efficiency and accuracy in order management.

Key Functionalities

Send Orders Electronically

Dealers can submit orders directly to JSI through CFI Suite without manual entry.

Receive Acknowledgments

Acknowledgments from JSI are automatically received and synced within CFI Suite.

Acknowledgment Discrepancies

Dealers can easily identify and resolve discrepancies between orders and acknowledgments.

How it Works?

The JSI Connector is an add-on to the existing Manufacturer Connector in CFI Suite for JSI-aligned contract furniture dealers. It enables a seamless synchronization between JSI (Manufacturer) and the dealer, ensuring a fully integrated workflow within CFI Suite powered by NetSuite.

Orders flow directly from the dealer's system to JSI, and acknowledgements are received in real-time, reducing the need for manual intervention hence saving time and optimizing productivity.

Pain Points Solved

1

Eliminates Manual Order Entry

Dealers no longer need to manually input orders into the JSI Portal, reducing errors and saving time.

2

Automates Acknowledgment Verification

The connector removes the need to manually check and cross-reference acknowledgment documents, ensuring accuracy and efficiency.
